

Preservation of Research data: Two Approaches

Scientific Data Migration

Moving from local format to domain standard format.

- Processed on a Hadoop cluster using a Taverna workflow
- ToMaR.

Evaluation results.

Cluster: 96 nodes with 1024 RAM

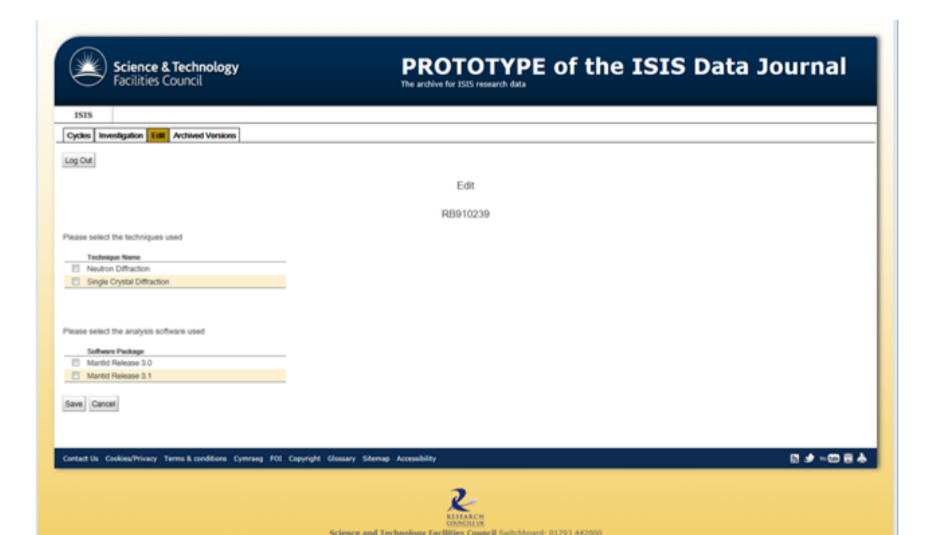

Adding Context to Data for Preservation

To be able to preserve complex data additional context is needed to ensure the content can be understood and reused.

Possible outputs relating to a scientific experiment

STFC has been working on a demonstrator system to collect and preserve these links.
